

Fixture 6 - No-space text extraction

This document is visually ordinary and contains several sentences with normal spacing.

A human reader should see words separated correctly, punctuation in the expected places, and normal paragraph layout.

However, the hidden extractable text layer deliberately removes every space between words.

This fixture is intended to trigger a heuristic that detects implausibly low whitespace in extracted text.

The quick brown fox jumps over the lazy dog. Numbers such as 2025, 482, and 641 are included as well.
